

Personalized Medicine Defined?

- Personalized medicine is an emerging practice of medicine that uses an individual's genetic profile to guide decisions made in regard to the prevention, diagnosis, and treatment of disease. Knowledge of a patient's genetic profile can help doctors select the proper medication or therapy and administer it using the proper dose or regimen. (<http://ghr.nlm.nih.gov/glossary=personalizedmedicine>)

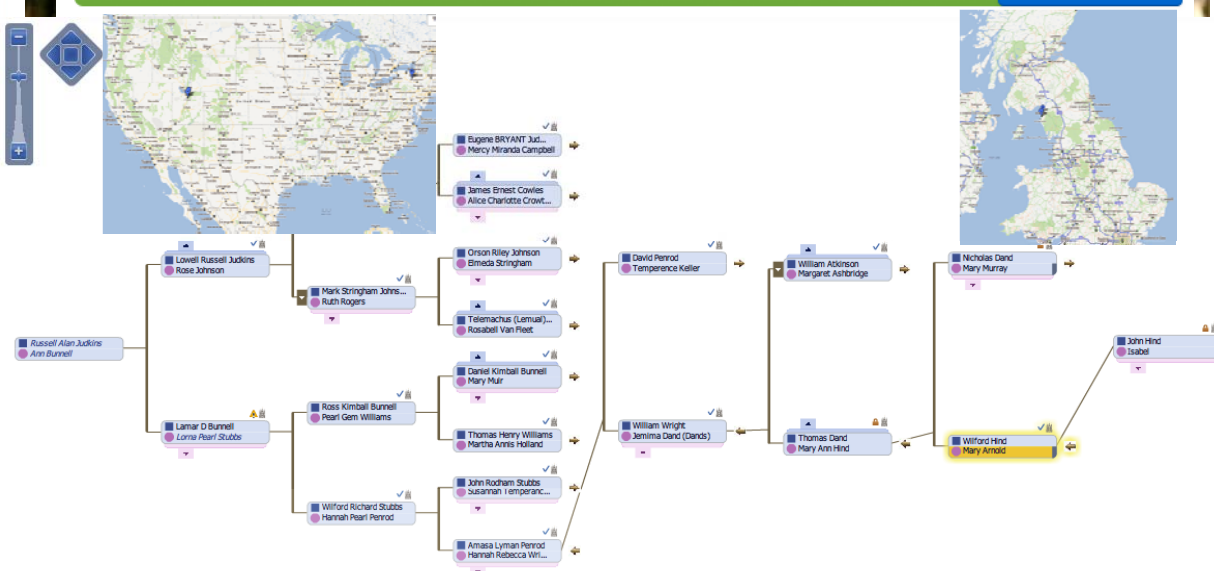

“The good physician treats the disease; the great physician treats the patient who has the disease.”

William Osler
